

Assessment 2 Instructions

[ITO5002-TP5-26/Assessments/2. Project/Assessment 2 Instructions](#)

Assessment 2: Iteration 1 report and presentation & Iteration 2 report

Word/time limit:

- **Report:** Max 1500 words (+/- 10%) for the report with the URL for the built artifact and PGP folders populated. (Iteration 1 report formative assessment is due Monday week 5 and Iteration 2 Report Due Sunday Week 6)
- **Live and recorded industry panel presentation (for Iteration 1 only):** 10–15 minute presentation. (Due Tuesday week 5, see submission portal)

Weighting: 50%

Individual/Team: Team

Teamwork

In order to ensure that team members are rewarded appropriately for their contributions, an individual team member's final mark for those assessments can vary based on defined criteria across the teaching period. Students will be required to complete a confidential self and peer assessment of their teamwork at the end of the unit. Peer assessments require maturity, responsibility and honesty. Your OLA will provide further details on this peer evaluation in Week 4.

After you have read this information, head over to the Assessment 2 Q&A discussion forum in Ed to ask any questions and see what your peers are saying about this assessment.

Assessment overview

This assessment task builds upon the work you have completed for [Assessment 1: The pitch](#). In this team-based assessment, you will be required to work with the cumulative learnings and activities over Modules 1–4 to develop your artefact that fulfills your promise—your pitch.

In this assessment, you will have the opportunity to show that you can, as a team, build an innovative, value-driven solution to help solve a problem concerned with your UN goal, using relevant open data for a particular audience, in order to communicate that solution to a potential sponsor. This artefact will need to satisfy your OLA and the industry panel who will be acting as possible sponsors, and will need to be presented accordingly. You will develop a system based on the 'functions' in your pitch that is robust and developed to industry-strength standards.

Iteration 1 is a [formative assessment](#), your report with the URL for the built artifact, is due Monday Week 5 and the presentation to your industry panel will take place on Tuesday Week 5. The feedback provided by your OLA and industry panel will allow you to make adjustments for Iteration 2.

In the [summatively assessed](#) Iteration 2, you will add to your first solution and amend your product report, showing that you can take on feedback from that first solution and incorporate it appropriately or show appropriate and knowledgeable reasons why you have not. This will be developed using agile philosophies and processes and as such, you will show that you are only too happy with any changes suggested. You will use Agile rituals in order to improve your processes and your product.

Watch the following video [00:57] for an overview.

ITO5002_MA.2_Assessment 2 overview

Assessment 2 overview courtesy of Gail Bourne and Najib Al Chamaa

This assessment supports unit learning outcomes 1, 2, and 3.

Assessment details

You will need to create a Project Governance Portfolio (PGP) using the following guidelines to structure the folders within the PGP.

In this assessment, using agile processes, you will need to produce:

- a project overview (a report) of what you intend to do, based on your pitch
- a Trello board to document and plan for epics, user stories, story mapping, and acceptance criteria
- an artefact, which will be a robust build that will be communicated to your 'project sponsor' for feedback and future changes
- a retrospective after feedback from Iteration 1 to incorporate better team processes for your next, better solution (Iteration 2).

Extra objects that helped you in developing your artifact will be documented in appropriate folders inside your PGP. e.g open data sources, testing/test cases, mockups, wireframes, system architect diagrams, user journey mapping per persona, Lotus Blossom, empathy maps, entity relationship (ER) diagrams.

Work through the following steps to complete each part of this assessment (Iterations 1 and 2):

Step 1: Develop your project overview

Using your pitch or changed (from feedback) pitch information, develop your project overview which contains:

A report:

- A brief description of the project—the problem statement and your UN goal.
- Target audience—a brief description of your intended audience (2 or 3 lines)— the **who** in your solution with [Personas](#) (Usability.gov, 2020). For the intended audience of your artifact up to this point. This will help you work out who you are designing for, and encourage you to be empathetic and see how they can use your application and if it fits their needs.
- High-level solution
- Your ethics canvas

Your **PGP** (changes throughout the unit, and will be graded at the end of Iteration 2). The contents of PGP will change as iterations progress, firstly for Iteration 1, which you will get feedback on and is formatively assessed, and after feedback from your industry panel for Iteration 1, to create Iteration 2, which will be summatively assessed (Iteration 2 is the result of an improved Iteration 1). The list of subfolders expected are as follows:

- Link to your URL of the built artifact for Iteration 1.
- Link to your URL of the changed Iteration 1 build for Iteration 2.
- The Data Governance folder which contains Open Data Details
- The Security Aspects folder
 - Specific security aspects for this product (updated as necessary)
 - All implemented security measures or security aspects are discussed here.
- Testing folder containing testing artifacts produced (usability testing videos, unit testing, A/B, test cases etc.).
- Link to your Trello board.
- The 'Support' folder with any supporting items, e.g. design thoughts, websites seen, testing artifacts produced (usability testing videos, unit testing, A/B, test cases etc.).

Step 2: Negotiate deliverables

Negotiate what you can deliver for the project documenting it in your backlog. You may add more, as you get feedback from your Iteration 1.

Step 3: Develop your ideas

As a team, agree on which ideas from the backlog you are able to deliver for Iteration 1 and develop them into user stories with acceptance criteria and document them on the Trello board.

Step 4: Build and test

Team members take user stories/tasks from the Trello board and add acceptance criteria to design, build, deploy, and test (on Monash development server) ensuring the Kanban board reflects progress (refer to essential reading for Kanban conduct). When complete, ensure thorough testing based on the acceptance criteria. Your testing regime should have been designed from your acceptance criteria before you began building.

Step 5: Move your artefact

When the iteration is complete, move your artefact to your own server environments for your project, and add a link to your artefact in the PGP folder, with any access instructions for your OLA.

Step 6: Prepare for your presentation to your industry panel

Prepare for your presentation to your industry panel of what you have developed for Iteration 1 purely for feedback. All team members must speak and remember to record the presentation. Include the following:

- Introduction—who you are etc. (1 min)
- Define the Goal you chose and why your team chose it (1 min)
- Explain your Problem statement/ Challenges (problem space) (1 min)
- Explain your solution—the who, what why and the so what (3 mins)
- Showcase your build and its use and how it has fulfilled that need—high-level, story-driven as opposed to this is what happens when you click a button (8 mins)
- Recap and ask for feedback and changes (1 min) (Remember to note all feedback into the appropriate folder on your PGP)

Step 7: Submit a link of your PGP to Moodle

Submit a link of your PGP to Moodle where your report will be with all links populated.

You are required to submit a link using the Assessment 2 submission point. You may do this on a Word or PDF document. Your OLA will use this link to access your PGP, for your report and its populated links and the link to the artefact (the build).

Step 8: Submit your video presentation

You are required to submit your presentation as a video link to your PGP. You will need to make sure that it is accessible to your OLA.

Step 9: Retrospective

Conduct a retrospective of your work as a team for Iteration 1 to improve your processes for Iteration 2. This should be uploaded to your PGP, 3 days after you receive feedback from your OLA. All your working files must be updated in both the PGP and Trello throughout the 2 builds.

The content of each PGP folder will be updated as you progress through Iteration 2, however, the PGP link will stay the same.

Submission details overview

You are required to submit the following:

- A project overview (a report) of what you intend to do, based on your pitch.
- A Trello board to document and plan for epics, user stories, story mapping, and acceptance criteria (this will change throughout the unit, as you develop).
- An artifact, which will be a robust build that will be communicated to your 'project sponsor' for feedback and then an updated/changed artifact based on that feedback.
- A retrospective following feedback for Iteration 1, to incorporate better team processes for your next, better solution and product report (Iteration 2).

Submission status

Your assessment MUST show a status of 'Submitted for grading' before it will be marked.

If your submission still shows a status of 'Draft (not submitted)', it will **not** be assessed and will incur late penalties after the due date/time.

Assessment criteria

For the product overview report (25%)

1. Brief description of the project—the problem statement, and the UN goal
2. Target audience—the 'who' in your solution with personas
3. The 'what'; the 'so what'
4. Ethics canvas
5. All appropriate links must be available on your PGP

Other deliverables from populated links (75%)—updated throughout Iteration 1 and 2, from feedback and further research into problem and solution.

1. Trello
2. Data governance
3. Security aspects (Expectations based on team composition)
4. Support folder including all aspects used to design, build and implement the solution, e.g. Design ideas/models
5. Artefact (build)
6. Retrospective (after Iteration 1 only)

Your work will be assessed using the following marking guide:

Assessment 2 marking guide

Criteria	No Pass Less than 50%	Pass 50–59%	Credit 60–69%	Distinction 70–79%	High Distinction 80–100%
Product overview report (25%) All appropriate links must be available on your PGP.					
Brief description of the project – the problem statement, your UN goal (2%)	Did not meet criterion.	The context and issue description provides a satisfactory outline but lacks some clarity and specificity about the problem and solution.	The context and issue description provide a sound outline of the problem and solution.	The context and issue, the problem and solution are clearly and thoughtfully outlined.	The context and issue of the problem and solution are concisely and comprehensively outlined.

Criteria	No Pass Less than 50%	Pass 50–59%	Credit 60–69%	Distinction 70–79%	High Distinction 80–100%
Target audience – the 'who' in your solution with personas (5%)	Did not meet criterion.	Satisfactory discussion on the significance of who but at a superficial level with minimal thought Lacks clarity, detail or specificity.	Sound discussion on the significance of who and is supported by some evidence, however, there is limited clarity, detail or specificity.	Clear and thoughtful discussion on the significance of 'who' and is supported by clear, detailed and specific evidence. A good choice of 'who'.	Concise and compelling discussion on the significance of who with a meaningful and insightful exploration.
The 'what' The 'so what' (15%)	Did not meet criterion.	Superficial discussion on the impact of proposed value and significance of each with minimal thought Lacks clarity, detail or specificity. The 'so what' was not thought about.	Sound discussion on the impact of proposed value and significance of each and is supported by some evidence, however, there is limited clarity, detail or specificity. The 'so what' was considered but without much reasoning.	Clear and thoughtful discussion on the impact and significance of each, and is supported by clear, detailed and specific evidence. The 'so what' was meaningful and well-thought-out.	Concise and compelling discussion of each with a meaningful and insightful exploration of proposed value 'So what' was meaningful, insightful and well thought out.
Ethics canvas (3%)	Did not meet criterion.	Canvas is present, but no understanding of its purpose.	A satisfactory understanding of the need for this canvas, however not completed in a way that could raise possible ethical concerns.	A good understanding of the need for this canvas, and completed in a way that could raise possible ethical concerns.	Showed a solid engagement with an understanding of the importance of this canvas and its purpose of raising possible ethical issues relating to this project.

Other deliverables from populated links (75%)—updated throughout Iteration 1 and 2, from feedback and further research into problem and solution.

Criteria	No Pass Less than 50%	Pass 50–59%	Credit 60–69%	Distinction 70–79%	High Distinction 80–100%
Trello (15%)	Did not meet criterion.	Format is acceptable and team has tried, but slightly unclear, and not easy to use. OR Not kept up to date as often by team members, but does demonstrate some understanding of how to use this tool to manage the team and project. High-level user stories match report. Broken down user stories mostly matches high-level user stories/functions OR User stories are written unclearly. Descriptions are appropriate and not precise. OR Acceptance criteria are a little inaccurate and non-comprehensive.	Format is usable for the intended audience AND Frequently updated by team members AND Demonstrates a proficient understanding of how to use this tool to manage the team and project. High-level user stories match report Broken down user stories matches high-level user stories/functions AND Stories could be broken down better with more appropriate and precise descriptions AND Acceptance criteria have been written well but not specific enough or missing some parts.	The format is easy to use for the intended audience (team & OLA). AND Kept up to date by most team members. AND Demonstrates a superior understanding of how to use this tool to manage the team and project. High-level user stories match report Shows superior analysis and evaluation of what is required in determining the successful implementation of each component. Broken-down user stories match high-level user stories/functions. AND Stories are broken down ready for building, descriptions appropriate and precise. AND Acceptance) written well, specific and complete.	The format is easy to use for the intended audience (team & OLA) AND Kept up to date by all members at all times. AND Demonstrates an exceptional understanding of how to use this tool to manage the team and project High-level user stories match report. Shows exceptional analysis and evaluation of what is required in determining the successful implementation. Broken-down user stories match high-level user stories/functions. AND Stories are broken down ready for building and written clearly. Descriptions are appropriate and precise. AND Acceptance criteria written well, specific and complete.

Criteria	No Pass Less than 50%	Pass 50–59%	Credit 60–69%	Distinction 70–79%	High Distinction 80–100%
Data governance (5%)	Did not meet criterion.	Entries are incomplete or vague, and/or incorrect. OR Shows very little (but some) thought of modelling and use of data.	Most requirements are met but if not there, an explanation of why has been included. Shows thought of what is required in a way that is mostly organised and logical. Some modelling.	All requirements met. Shows some analysis and critical evaluation of what is required Well-organised and logical, with an obvious understanding of how and why the requirements are needed. Sufficient modelling such as an Er diagram/or more specific modelling carried out by students with data scene expertise.	All data sources defined, with copyright details, physical access, granularity Well-organised and logical, obvious understanding of how and why the requirements are needed. Extensive modelling such as an Er diagram/or more specific modelling carried out by students with data scene expertise.
Security aspects (Expectations based on team composition) (5%)	Did not meet criterion.	Sufficient knowledge of security aspects concerning their project, showing a general understanding of specific and mostly relevant security vulnerabilities.	Proficient knowledge of security aspects concerning their project, showing a general understanding of specific and relevant security vulnerabilities.	Superior knowledge of security aspects concerning their project shows a general understanding of specific and very relevant security vulnerabilities.	Exceptional knowledge of security aspects concerning their project, showing a more than general understanding of specific and very relevant security vulnerabilities.
Support folder including all aspects used to design, build and implement the solution, e.g. Design ideas/models (5%)	Did not meet the criterion.	Aspects covered but not meaningful and no obvious understanding of how or why they were used.	All necessary supporting aspects defined, showing reasonable understanding of how and why these items are needed.	All necessary supporting aspects defined, well organised and logical, showing a comprehensive understanding of how and why these items are needed.	All necessary and relevant supporting aspects are defined, well organised, and logical, showing an exceptional understanding of how and why these items are needed.

Criteria	No Pass Less than 50%	Pass 50–59%	Credit 60–69%	Distinction 70–79%	High Distinction 80–100%
Artefact (Build) (40%)	Did not meet the criterion.	Artefact designed/built was fit for purpose, had few errors, but with limited functionality, and poor user experience. System somewhat reliable but not readily deployable.	Artefact designed/built was fit for purpose, had no errors, with an expected amount of functionality and average user experience. Reliable in the short term, the future of artefact is somewhat considered	Artefact designed/built was fit for purpose, had no errors, with more than an expected amount of functionality and appropriate user experience. Must be robust and deployable.	Deployable current working system, no errors, fit for purpose, robust, exceptional quality, more than expected functionality with exceptional and well thought out the user experience.
Retrospective (after Iteration 1 only) (5%)	Did not meet the criterion.	Each of the required areas of a retrospective defined. AND Changes needed are accurate and necessary. AND Useful but includes changes that are not about processes. BUT Shows some understanding of retrospectives and the reasoning behind them.	Planned and thought about adequately. AND Understanding changes needed accurate and comprehensive and clearly focused, easy to understand. AND Mostly referring to changes in processes. AND Shows understanding of reasons for retrospectives.	Quite well thought out and planned. AND Some thought obvious in the changes to processes needed. AND Accurate / comprehensive and clearly focused, organised and logical. AND About processes only. AND Shows understanding of retrospectives and the reasoning behind them.	Exceptionally well thought out and planned AND Critical thinking is obvious in changes in processes needed. Accurate and comprehensive and clearly focused, organised and logical. AND About processes only. AND Shows a profound understanding of retrospectives and the reasoning behind them.

Assessment declaration and statement of authorship

By submitting my assessments I declare that:

- This is an original piece of work and no part has been completed by any other person.
- I have read and understood the guidelines on the [Assessment and academic integrity policy](#), and no part of this work has been copied or paraphrased from any other source except where this has been clearly acknowledged in the body of the assessment and included in the reference list.
- I have retained a copy of this assessment in the event of it becoming lost or damaged.

I agree and acknowledge that:

- I have read and understood the declaration and statement of authorship.
- I accept that use of my Monash Online account to electronically submit this assessment constitutes my agreement to the Monash Online Assessment Declaration.
- If I do not agree to the Monash Online Assessment Declaration in this context, the outcome of my assessment may not be valid for assessment purposes and may not be included in my aggregate score for this unit.
- I am aware that it is not acceptable to resubmit the same piece of work (in part or as whole) for multiple assessments without permission from the Unit Coordinator.

Prior to submitting your assessment, please refer to the [Academic integrity](#) Monash Library modules to ensure the integrity of your submission.

Further information relating to the penalties for plagiarism, which range from a formal caution to expulsion from the University, is contained on the [Academic integrity and what plagiarism, collusion and cheating mean](#) page.
